

Section I

General

1. The AEC Electronics Checklists have been developed to help reduce memory overload and increase safety, particularly in times of high stress of workload when emergency or abnormal situations arise. The AEC Checklist model EC-TO can be either portable or a permanent fixture. With the speech output on Model EC-TS, it should be permanently mounted for its installation. The installation and use of the AEC Electronic Checklist will be the discretion of the aircraft operator and will have the FAA Approved Airplane Flight Manual (AFM) or Pilot's Operating Handbook (POH) available for reference for all operations. The AFM and POH takes precedence in case of conflicting checklist information.

FAA APPROVED
